

GROUP QUALITY POLICY

The main aim of our Quality policy is to ensure the satisfaction of patients, healthcare professionals and health authorities with which we collaborate.

Our Quality ambition is driven by the strong commitment of our Executive Committee members and the positive involvement of all Ethypharm employees.

OUR QUALITY AMBITION:

All committed!

Provide essential medicines that improve patients' lives.

Comply with health authorities requirements throughout lifecycle of the drug.

Develop our employees' competencies, empowerment and accountability.

Continuously improve our organisation and processes with a zero defect approach.

Our Organisation must meet the regulatory requirements of the different countries to which Ethypharm sends its Pharmaceutical products.

It takes into account the life cycle of a product and ensures product quality and the integrity of data from pharmaceutical development, via the transfer of technology and manufacturing, through to distribution to patients.

It is based on a harmonised **global Quality System** which defines the Quality standard of the Group and allows each country to integrate specific local regulatory factors.

Our suppliers and subcontractors are selected according to the same standards.

The effectiveness of the implementation of our Pharmaceutical Quality System is monitored through common indicators and checked in particular through Quality audits and reviews.

The Ethypharm Pharmaceutical Quality System foremost drives progress and collaborative **continuous improvement** to ensure our patients benefit from the progress made.

**Each employee in the Group
is a contributor to Quality.**
